The UCSB people behind this news are gifted researchers and scholars and dedicated teachers and mentors. They share new knowledge with their classes, expertise with their communities, and discoveries with the world.

- Five Nobel Prize winners are professors at UCSB. Faculty members have also received National Medals of Science, a National Medal of Technology, and a National Medal of the Humanities. They have been elected to the American Academy of Arts and Sciences, the National Academy of Sciences, and the National Academy of Engineering, and are widely recognized internationally. They are leaders in the professional organizations in their field.

- UCSB’s faculty members show outstanding achievement early in their career. Nineteen, for example, have active Faculty Early Career Development (CAREER) Program awards. The CAREER award is the National Science Foundation’s prestigious award for teacher-scholars deemed most likely to become the 21st century’s academic leaders. Of these, one has received the Presidential Early Career Award for Scientists and Engineers (PECASE), the highest honor the U.S. government bestows on young researchers in these fields. Talented junior faculty members also have received such major recognitions of achievement and potential as UC President’s Research Fellowships in the Humanities, Office of Naval Research Young Investigator awards, Packard Fellowships for Science and Engineering, Beckman Young Investigator Awards, and Sloan Research Fellowships.

- Approximately 30 percent of our faculty members hold appointments in two or more departments. In the campus interdisciplinary research centers, groups, institutes, and laboratories, undergraduate researchers and graduate students are involved with the kind of work across disciplines that will characterize inquiry in the 21st century.

- Eleven of the campus’ more than 80 interdisciplinary research units are national research centers—six of which the National Science Foundation funds. New leading-edge centers include the Center for Nanotechnology in Society (NSF), the International Center for Materials Research (NSF), and the UC Institute for Research in the Arts.

- UCSB is one of only 62 institutions in the United States and Canada elected to membership in the Association of American Universities, placing it in the top 1.5 percent of all universities and colleges in those countries.

- Continuing a trend of many years, National Science Foundation dollars account for the major portion of the campus’ funding. Reflecting its intellectual strength, UCSB ranks 19th among the nation’s universities based on total NSF dollars received and is among the top 25 universities in five NSF directorates: UCSB is 15th in Mathematical and Physical Sciences, 16th in Biological Sciences, 21st in Geosciences, 23rd in Computer and Information Sciences and Engineering, and 25th in Social, Behavioral, and Economic Sciences.

- Based on the frequency with which UCSB research is cited in professional publications, the Institute for Scientific Information has placed UCSB among the top 10 of the nation’s top 100 federally funded universities.

- UCSB—which does no classified research but is developing new communications, sensing, data-storage, and materials technologies with nearly unlimited potential commercial applications—ranks 10th among universities nationwide that receive Department of Defense funding for fundamental research.
Although the $153 million in extramural funding awarded to UCSB projects in fiscal year 2005 was somewhat less than the $161 million record set in 2004, it is 35% above the total five years ago, and about twice what it was 10 years ago. Research expenditures were $130 million in fiscal year 2005—well above the record total of $119 in 2004.

*Includes Materials Research Laboratory and the Mitsubishi Chemical Center for Advanced Materials.

**Includes interdisciplinary research units run by the central administration for the entire campus: California NanoSystems Institute, Institute for Collaborative Biotechnologies, Kavli Institute for Theoretical Physics, National Center for Ecological Analysis and Synthesis, the seven Organized Research Units, and the UCSB Natural Reserve System.

***Includes Arts & Lectures, Davidson Library, Graduate Division, University Extension, and programs under the Vice Chancellors for Administrative Services and Student Affairs.
Of those funds received from non-federal sources, $17.8 million are flow-through from federal sponsors. Thus, total federal funding is 84% of the award total.

Support from private, industry, local government, UC, and state sources rose slightly in FY 05. The National Science Foundation remains the largest single funder of UCSB, followed by the Department of Defense, through agencies including the Army Research Office, the Office of Naval Research, the Defense Advanced Research Projects Agency, and the Air Force Office of Scientific Research.

2005 Extramural Awards—$153 Million

Senior Officers of the University

Chancellor
Henry T. Yang

Executive Vice Chancellor
Gene Lucas

Vice Chancellor for Administrative Services
Donna Carpenter, Acting

Vice Chancellor for Institutional Advancement
John M. Wiemann

Vice Chancellor for Research
Michael Witherell

Vice Chancellor for Student Affairs
Michael D. Young

Assistant Chancellor for Budget and Planning
Todd Lee

Deans

College of Letters and Science
Division of Humanities and Fine Arts
Dean: David Marshall
    Executive Dean, College of Letters and Science

Division of Mathematical, Life, and Physical Sciences
Dean: Martin Moskovits

Division of Social Sciences
Dean: Melvin Oliver

Undergraduate Studies
Dean: Alan J. Wyner

College of Creative Studies
Dean: Bruce Tiffney, Acting

College of Engineering
Dean: Matthew Tirrell

Donald Bren School of Environmental Science and Management
Dean: Ernst Ulrich von Weizäcker

Gevirtz Graduate School of Education
Dean: Jane Close Conoley
